Diagnosis and Management of Attention-Deficit/Hyperactivity -

Diagnosis and Management of Attention-Deficit attention-deficit/hyperactivity disorder symptoms. Proper diagnosis and treatment can disorder in adults

While many children are naturally quite active, kids with hyperactive symptoms of attention deficit disorder are always moving. They may try to do several things at once, bouncing around from one activity to the next. Even when forced to sit still, which can be very difficult for them, their foot is tapping, their leg is shaking, or their fingers are drumming.Â Symptoms and Diagnosis â€“ Including the signs of hyperactivity, impulsivity, and inattention. (Centers for Disease Control and Prevention). Authors: Melinda Smith, M.A., Lawrence Robinson, and Jeanne Segal, Ph.D. Last updated: June 2019. Attention-deficit hyperactivity disorder (ADHD) is a condition that people discuss a lot these days, often ascribing the term casually to persons who seem unusually frenetic, "flaky," or scattered. But, as a medical condition, it is not so easily described.Â Children and adults who are inattentive have difficulty staying focused and attending to tasks that they perceive as mundane. Because of this, they may procrastinate doing work that requires a great deal of mental energy.Â While these symptoms are not taken into account during the diagnosis process, they frequently affect the quality of people's lives. When people who live with ADHD realize that these behaviors are connected with ADHD, they can experience a sense of relief or have â€˜ahaâ€™ moments.
