Technology in Ancient Egypt

Do you know a lot about Ancient Egypt and its technology? Oh so you don't well so let me tell you about it. (It is awesome!) The first thing that I will start with is the communication. One of the ways that they used communication is through hieroglyphics. Hieroglyphics was a way of writing down something for someone else to read. Hieroglyphics were forms of writing in Ancient Egypt. One last thing is that the basics of hieroglyphics that it is all just pictures and sounds for different meanings.

One of the other awesome things with Egyptian life was how they had for warfare. With its military technology all that was knowledge. They were very smart when it comes with military things. Some of the weapons that they used was used hooks, spearheads, and also ax heads. The ancient hunters used flint, jasper, and other weapons. They also used a lot of stick with their weapons. Also they had armor too. They made chestplates. As they riding horses they horses were very small than the ones today. But then later the farmers learned how to breed the horses. That is pretty much all about warfare things to that they had to protect themselves and to fight back.

This ancient civilization was very well with technology. Another thing that they had was ship building. During this time the Nile river played a huge role with all the ships that came by. They mostly used papyrus reeds to make boats. But those boats that they made were small and they could not really carry that much stuff. But then later they started to import cedar wood from Lebanon. In this time you could tell that they really needed their boats to help do some many different things.

Now I think that you guys will like this one. This is about surgery. They must have had some very good technology. They had to do surgery. But they did not know how to do major surgery so they had to do minor surgery. One of their tools was a type of stone and from flint. Also they could have used a class as knives. One last thing that they used was some sharp things that they could find and used them as needles.

Another thing that they learned to do was how to do mathematics. Also that is a good thing because we need math for everything. They used geometry to help build the pyramids and other big buildings. They also used Math to help to keep track of businesses transactions. Most of the time they used the decimal system to help them with a lot of different things. The numbers that they mostly used was 1, 10, 100 etc. As you can see they used math and now we can learn from them and now we have math.

Have you ever wondered how the women wore makeup or even if they had it. Well they did and they had some very creative ideas to make that happen. Also the men wore makeup too. They made dark eye makeup. That was made from soot, and other different minerals. In ancient Egypt to them this was a fashion statement. Also the makeup that they had a side affect from protecting their skin from the hot and dry desert and sun. In my opinion I think that in their times that would be a helpful side affect.

These people had a lot on their plate with doing so much. One of the things was the pyramids because that helps a ton of things in their civilizations. Another thing that was the palaces that they made and that for all the royal people there. One other things was that they made so many different machines but they were super simple machines of different things. One last thing that there was the government and people really needed this so they could keep track of different things. But those things are just a few of the construction projects that they had.

This is a very big thing that we are about to talk about. I mean this thing was big in their time of life and they really needed this. This thing was paper! Or as they called papyrus. It took some effort to make this papyrus. They were made from a reed plant. One of the things they used papyrus was used for was different types of documents for different reason and also they used them for religious texts. One last thing is that it can keep process secrets that I think that is helpful.

One other thing that everyone needs that they invented was the toothbrush and toothpaste. Everyone needs it so that is a good thing that they invented it. One reason why they invented it was because they were eating a lot of bread and it had a lot of grit and sand in it. So they had many teeth problems. Their toothbrush had a lot of different ingredients. The ingredients were eggshells, ashes, and ox hooves. If we had a choice I hope some people would pass.

The last thing that I am going to talk about is Medicare. In their time they had a lot of medicines and cures. One of the examples is how they cured eye infections. Well what their ingredients were was honey and you might be grossed out by this one and it is human brains. Another example was the cure of coughs. What the ingredients were was a whole cooked mouse. All of these ingredients were to ward off the spells that made the person sick. In conclusion everything that is in these paragraphs is everything that my group has learned is pretty much what we have learned about the technology in ancient Egypt.

Fun Fact: The first walled city was Jericho

Ancient Egyptian technology describes devices and technologies invented or used in Ancient Egypt. The Egyptians invented and used many simple machines, such as the ramp and the lever, to aid construction processes. They used rope trusses to stiffen the beam of ships. Egyptian paper, made from papyrus, and pottery were mass-produced and exported throughout the Mediterranean basin. The wheel was used for a number of purposes, but chariots only came into use after the Second Intermediate period. The Egyptians also played an important role in developing Mediterranean maritime technology including
